

Artificial Intelligence Learns the Stock Market

STOCK MOVEMENT PREDICTION

Premonition, the World's Largest Litigation Database, captures more cases than all the other court data providers combined. Premonition trained an machine learning system to analyze litigation and stock market data. By building regressions and quantitative models around the data, Premonition can calculate, industry specific, relative stock market performance 4 to 24 months in advance.

Unique Litigation Data

- Results & Case Durations
- Open Case Analysis
- Geographic Distribution
- Company Metrics
- Litigation Prediction

Premonition's Statistical Analysis

- Industries with Significant Litigation Component:
 - E.g. Financial Services, Insurance, Pharmaceuticals, Medical Devices, Tobacco, Technological Hardware, etc.
- Public Company (5 yr. +) with Majority of Business within U.S.

Premonition Advantages

- Analytics results not in Correlation to Traditional Post-Earnings Reports
- Future Purchase Dates & Approximate Hold Periods
- Follow Up Analysis Based on Events & Trend Changes

“Premonition concluded that courtroom results must eventually reflect in the company’s balance sheets and then in their stock prices. Selling a basket of soon to be under performers short and buying a basket of out performers should produce significant, market-neutral stock market returns.”
